

Ansh Singh

Software Engineer | Backend & Full Stack | Bengaluru, India
+91-6359451876 | anshsingh25bd@gmail.com | LinkedIn | GitHub | ansh-singh.in

SUMMARY

Software Engineer with full-time experience building production backend and full-stack systems using **Python, Django, PostgreSQL, GraphQL/REST APIs, and Next.js**. Experienced in payment integrations, database optimization, API development, and production observability.

EXPERIENCE

DigiStashing Technologies

Bengaluru, India (Remote)

Junior Software Engineer

Apr 2026 – Present

- Designed and implemented an end-to-end **Razorpay payment integration** with webhook processing, transaction reconciliation, and failure recovery, processing **15,000+ transactions in 3 months**.
- Designed PostgreSQL schemas and Django **GraphQL/REST APIs** powering transaction, customer-management, and dashboard workflows for **100+ daily active businesses**.
- Implemented **Grafana and Loki observability**, reducing production issue diagnosis time from **4 hours to 1 hour**.
- **Reduced database query time from ~220ms to ~140ms** by eliminating N+1 queries through Django ORM optimization and query batching.

Software Engineer Intern

Dec 2025 – Mar 2026

- Contributed to production Django/Next.js systems, developing backend APIs, database workflows, and internal dashboards.

Full Stack Developer Intern – Tixon

Mar 2025 – Aug 2025

Internship

Chennai, India

- **Reduced hosting costs by ~58%** by migrating compute workloads to Cloudflare Workers; integrated Zoho Payments with automated reconciliation and failure recovery.
- Designed backend architecture, PostgreSQL schemas, APIs, and frontend workflows for a booking and event-management platform supporting **1,000+ users/hour** at peak traffic.

Full Stack Developer Intern – Quamin Tech Solutions

Oct 2024 – Feb 2025

Internship

Bengaluru, India

- Built REST/WebSocket services for IoT sensor data, improving message delivery from **~81% to ~92%** through reconnection handling and reliability improvements.

PROJECTS

Political Bias Classifier | PyTorch, RoBERTa, Hugging Face | IEEE Paper

- Fine-tuned a **RoBERTa-base transformer** for multiclass political-bias classification, achieving **94.48% accuracy** on **37,554 manually labeled** news articles.
- Published at **ICSSAS 2025 (IEEE)** with the model and inference pipeline open-sourced on Hugging Face.

Memegen | Next.js, Azure AI, Supabase | LIVE

- Built a full-stack application generating AI memes from real-time news headlines with authentication and a public gallery.
- Implemented prompt validation, content filtering, and fallback handling for safer AI-generated content.

ACHIEVEMENTS

1st Prize – Hackathon Genesis 1.0 (TPHxSRM) | Decentralized blockchain voting application

AWS ML Foundations – AWS Academy Graduate

EDUCATION

SRM Institute of Science and Technology

Kattankulathur, Tamil Nadu

B.Tech in Computer Science and Engineering

Sep 2022 – Jun 2026

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C++

Backend: Django, Django REST Framework, FastAPI, Node.js, GraphQL, REST APIs, WebSockets, Webhooks

Frontend: Next.js, React, Tailwind CSS

Databases: PostgreSQL, Redis

Payments: Razorpay, Zoho Payments

Cloud & DevOps: AWS, Cloudflare Workers, Docker, Linux, GitHub Actions, CI/CD, Grafana, Loki
